3. ONLY CIRCULAR HOLES ARE PERMITTED; RECTANGULAR OR SQUARE OPENINGS ARE STRICTLY PROHIBITED.
4. HOLES WITHIN CANTILEVERED SECTIONS ARE NOT COVERED BY THESE RULES AND REQUIRE A SEPARATE STRUCTURAL ANALYSIS.
5. HOLE SIZE AND QUANTITY LIMITS:
 - BEAM DEPTH $\leq 3\frac{1}{2}$ " : MAX HOLE DIAMETER = $\frac{3}{4}$ "
 - BEAM DEPTH = $5\frac{1}{2}$ " : MAX HOLE DIAMETER = $1\frac{1}{8}$ "
 - BEAM DEPTH = $7\frac{1}{4}$ " : MAX HOLE DIAMETER = $1\frac{1}{2}$ "
 - BEAM DEPTH $\geq 9\frac{1}{2}$ " : MAX HOLE DIAMETER = 2"
 - MAXIMUM 3 HOLES PER SPAN UNDER NORMAL LOADING CONDITIONS.

1. Nails: Min. 1 1/2" top/bottom edge distance, 2" row spacing, 2 1/2" end setback.
2. Bolts comply with ASME B18.2.1-2012; holes match bolt diameter, min. 2" top/bottom edge distance, washers under head & nut, 3" min. end setback.
3. Confirm beam adequacy from uniform load tables prior to using listed values.
4. Table values based on 100% stress; per code, +15% for snow roofs, +25% for non-snow roofs.

EXAMPLE – SIDE LOAD CONNECTION DESIGN

Given:

- Joist spacing = 24 in. (2 ft)
- Joist reactions = 700 lb and 900 lb

Convert reactions to equivalent side load:

$$700 \div 2 = 350 \text{ plf}$$

$$900 \div 2 = 450 \text{ plf}$$

Required load transfer for the outside

LVL ply:

$$w = 450 \text{ plf}$$
